DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 7, 8 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Lecoq. The reference to Lecoq teaches the formation of a detector device that may include a layer of LuYAlO_3 which is formed on a LSO layer (14), which constitutes a substrate, and where the molar fraction of Lu is greater than zero and less than one. See Fig. 2, and the discussion at [0018].

In addition, photodetectors (22), which inherently must include electrodes, are formed on the opposite side of the LuYAlO_3 from the substrate (14), thus meeting the limitation of claim 7.

Allowable Subject Matter

Claims 2-6, 9 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
